

Carriage Rollers

Carriage Rollers - Carriage rollers are especially designed bearings that are utilized on lift masts in order to help them function in difficult environmental conditions. Lift masts are often subjected to shocks, oscillations, high dynamic and vibrations and static loads. This equipment is regularly exposed to environmental influences like for instance dust, cold, heat, aggressive ambient air, moisture and contamination. Therefore, the guidance arrangements of lift masts need to be specifically tough and have a certain high load carrying capacity.

Carriage rollers have been developed as the solution for working in different environmental surroundings. These bearings are the solution where the guidance arrangements of the lift masts need to be cost-effective and maintain operational security while having the capability to deal with a particularly high load carrying capacity.
